SOW
ON TIME

SUMMER 1942

Sow on Time..

A FEW days or a week's delay can mean the difference between profit and loss on your crop, as one week's postponement of sowing may cause the crop to finish several weeks late.

Today, as never before, we must be on time. Because of labor shortages and increased difficulties in production, lost motion must be eliminated; and those who have the courage, resourcefulness and tenacity to keep going will be rewarded.

The Easter season just passed was the best in years and proved that although at war the people expressed their emotions with flowers just as they have always done.

Plan with thought: "Sow on Time".

The name *Gloeckner* has long been associated with the seed trade. We wish to identify it as a standard of quality for many years to come. To accomplish this we pledge a consistent year after year supply of high quality seed.

This label, a facsimile of our Spring catalogue cover, with the year plainly marked, is attached to every package of seed, and is your guarantee that the seed therein is fresh from this year's crop.

ANTIRRHINUM

WINTER SNAPDRAGONS For Greenhouse Culture

Early flowering varieties of Antirrhinum have been developed through constant breeding. They are not the largest flowering but are of medium size which have been in favor with the retailer. For Spring flowering the varieties producing larger spikes should be grown.

Seed should be sown late in June or early July for Winter flowering. High temperatures prohibit germination of the seed and one must, therefore, select a cool location for the seed flats.

Damping off is a serious problem and all precautions should be taken to avoid it. The soil should be sterilized with steam or other efficient measures, and after the seed germinates good circulation of air and very little watering will help to prevent this trouble.

Experiments have shown that Snapdragons do better if the fertilizer content in the soil is not very high. This is one of the easiest crops to grow when planted in fresh soil and grown in a well ventilated cool greenhouse.

SNAPDRAGONS WILT may be caused by a single, soil-borne fungus, Verticillium which also causes Seidowitz Disease or wilt of Chrysanthemums. The only positive prevention for this disease lies in the exclusive use of sterilized soil, from the seed flats to the final potting or benching soil. Do not invite trouble by planting this crop in old 'mum soil unless it is first sterilized.

Siter's Rainbow Strain Cineraria

CINERARIA

"Siter's Rainbow Strain"

The Commercial Cineraria

If you are interested in a Cineraria that is profitable to grow, and has colors and size of flowers that surpass your most exacting demands, then by all means try SITER'S CINERARIA.

By continuous reselection this strain has more brilliant, sunproof shades, ranging from the bright eyed types to the finer pastels and Cornflower blues, which are sure to please your most discriminating trade.

ORIGINATOR'S PACKETS, \$2.00 EACH

Cremer's Prize Strain — This strain has been greatly improved by the originator — has small foliage that is wilt-proof with tremendous heads of flowers of the brightest colors.

Tr. Pkt	1/32 oz.	1/16 oz.
\$1.50	\$4.00	\$8.00

Positively do not use soil that was previously used for Mums and especially so if your Mums were affected with Verticillium wilt or Seidewitz disease. CINERARIAS are attacked by this wilt which is a soil born fungus. It will cause the lower leaves to wilt and die and then gradually kill the entire plant. The only prevention for this trouble is to use new field soil from seed flats to finished pot. If you do use old chrysanthemum soil be sure to sterilize it. **TO BE ON THE SAFE SIDE IT IS RECOMMENDED TO STEAM STERILIZE ALL SOILS BEFORE USING.**

CENTAUREA CYANUS (Cornflower)

Listed below are the finest improved Florist strains of Centaurea Cyanus. The flowers are large, fully double and the colors intensified. The extra long stems of this strain make them excellent for cut flower purposes. Responds to additional light. Wilt of Centaurea Cyanus may be caused by a single soil born fungus or Verticillium which also causes Seidewitz disease or wilt of Chrysanthemums. The only prevention for this disease lies in the exclusive use of sterilized soil from the seed flats to the finished pot or bench soil. Do not invite trouble by planting this crop in old mum soil unless it is first sterilized.

DELPHINIUM PACIFIC STRAIN Vetterle & Reinelt

WE SUPPLY ONLY THE ORIGINATOR'S STRAIN

This is the finest strain of Delphinium yet introduced. From our personal observations in the field we find this has unquestionably proven to be the leader in Delphiniums of the better type. The flowers are immense in size, well set on strong, straight stems, do not shatter, and are 60 to 80% mildew resistant.

July or August sowing and transplanting into the field during the fall will produce an early crop with large spikes. Delphinium's require a well drained soil, neutral in reaction. January sowing will produce flowers during the summer.

BLUE BIRD SERIES

This series can be recommended as being the **clearest medium blues with white bees**. They carry well formed round flowers 2½ inches in diameter on very long, graceful spikes.

GALAHAD SERIES

Flowers **Clear White**, averaging three inches in diameter, pyramidal spikes, good branching habit, strong whippy stems with a high percentage of mildew resistance.

Tr. Pkt.	¼ oz.	Oz.
\$1.50	\$5.00	\$16.00

CAMELIARD SERIES

A pure lavender self, with white bee, individual flowers, are very round and flat. Excellent growing habits.

ROUND TABLE SERIES

This represents **all the color combinations of the Knights and their Ladies** which will eventually be introduced. Some three hundred different crosses were used to make up this group.

BLUEJAY SERIES

Color striking. **Clear medium to dark blue**. Very intense and alive with contrasting bee.

Tr. Pkt.	¼ oz.	Oz.
\$1.25	\$4.50	\$14.00

BLACK KNIGHT

The individual florets, 2 to 3 inches in diameter, are **Dark Purple**, beautifully rounded form with heavy velvety texture. Very large well formed spikes.

KING ARTHUR SERIES

Brilliant Royal Violet with large white bee. Individual florets 2½ inches in diameter, thin woody stems, small foliage, graceful spikes. Excellent for cut flowers. Mildew resistance from 80 to 90%.

GUINEVERE SERIES

Light Pink Lavender self with white bee. Individual florets 2½ to 3 inches in diameter, large spikes, excellent branching habits. For cut flowers and show purposes. Mildew resistance—50 to 70%.

SUMMER SKIES SERIES

Clearest Light Blue with white bee. Individual florets 2 to 2½ inches in diameter. Thin woody stems with very strong branching habits. Ideal for cut flower purposes. Mildew resistance—40 to 60%.

Didiscus Coeruleus

ANNUAL LARKSPUR

GIANT IMPERIAL or BASE BRANCHING

Tall, upright compact, basal branching in habit, the Giant Imperials have superseded all other types of Larkspurs for florists' and general garden use. The delphinium like spikes or double flowers, carried on stems 4' - 5' long, are compactly placed on the upright growing plants, requiring only about one-half the space needed for the old stock flowered type of Larkspur.

White King — Glistening white, huge flowers25	1.00	10.00
White Spire —Pure white, early25	1.00	10.00

Larkspur seed may be sown directly in the open in the fall and will flower the following spring. There are two distinctly different methods used and each have a number of successful supporters. The first method is to sow the seed fairly early in the season about August 15th to September 15th. The small Larkspur seedlings will be sufficiently large enough when cold weather sets in to winter over when given a light mulch. The other method employed is to sow the seed in rows in late October or Early November so that it will not germinate until early next spring. This crop of Larkspur will generally come in shortly after Delphinium Belladonna.

LUPINUS (Annual)

New Giant King

A new improved strain. 3 to 4 ft. tall. King Lupinus have the base branching habit, with four to six long spikes to the plant. Each spike has from 25 to 50 more blooms than the Hartwegii type. The blooms are also a little larger. Sow seed in early October in pots and follow Chrysanthemums; will bloom in April and May.

Primula Springtime

PRIMULA MALACOIDES "SPRINGTIME"

ANOTHER *Gloeckner* INTRODUCTION

Springtime is one of the finest Malacoides ever offered. The color is an attractive **salmon pink** which does not fade with age. The flower stems are strong and support a profusion of good sized blooms; and unlike many other varieties of Malacoides, the foliage has good texture and is fairly resistant to rot. Thus the outstanding features of this variety are its pleasing salmon pink color, compact habit of growth and excellent keeping quality.

Seed sown in June will make good flowering plants for January. September sown seed will produce good plants for early Spring; while later sowings can be grown into small plants usable in combinations.

PEPPERS

Florists have been looking for a greater variety of potted plants for fall and Christmas. The Ornamental Pepper which is easily grown from seed and gives satisfaction as a house plant should be a valuable addition to this class. The seed we offer is from careful single plant selections which possessed the following desirable characteristics: Good habit of growth; Quantity and color of berries and plants that carry them well above the foliage. We consider the varieties listed below the best in their type.

CHRISTMAS CANDLE

A new type Christmas pepper bearing large quantities of medium candle-like fruit held erect on the plant. Sow June 1st for finished plant in September. Sow June 18th for finished plant in November. Sow July 1st for finished plant at Christmas. PINCH TWICE.

LONG POINTED

A fine selection of long pointed type Christmas pepper, Fruit somewhat smaller than Christmas Candle. This type carries large quantities of fruit, is a good grower and grows erect. When the fruit ripens it turns from white to yellow and orange, then to a lively scarlet. Sow July 1st for Christmas. PINCH ONCE.

BIRDS EYE

This is the ever popular birds eye pepper or holly berry type. Makes a good dwarf plant literally covered with small round peppers about twice the size of a pea. The fruit is born on top of the foliage, making it an excellent type for Christmas use. Sow July 1st for Christmas. PINCH ONCE.

YELLOW KING

A long pointed golden yellow pepper. This variety is somewhat taller and just a trifle loose in its habit, however for make up work it is excellent, if you need a pepper of this color. Sow July 1st for Christmas. PINCH ONCE.

TRADE PACKET \$1.25

PLEASE NOTE: The sowing dates as given are for the latitude and vicinity of New York City. If you are located farther north it would be well to sow a little earlier. If you are located to the south with more sunshine and a later fall it is suggested that you sow a little later. Sowing dates must vary depending on your particular location.

PEPPERS are heavy feeders therefore do not allow the plants to become starved but keep them growing at all stages. They must be fed regularly, even when in fruit to maintain good color of foliage and berries.

SWEET PEAS

EARLY OR WINTER FLOWERING

Sweet Peas require a disease free, well aerated soil to which ample amounts of organic matter have been incorporated before planting. Many growers have found that steam sterilizing the soil and then leaching heavily with cold water has given very good results. Only well grown crops are profitable, and only long stemmed Sweet Peas are finding a ready market.

The results of experiments show that bud drop is more prevalent when the growth is soft and vegetative. Withholding the moisture during the short days has proven beneficial.

Sweet Peas do not require high amounts of fertilizer. In fact, if the nitrate nitrogen is about medium, better results can be expected.

Good Winter crops may be grown successfully on raised benches but, for the spring crop we heartily recommend ground beds.

Sowing and Flowering Dates for EARLY OR WINTER FLOWERING SWEET PEAS

Date to sow seed	Time of flowering	Date to sow seed	Time of flowering
*July	October—January	September	February—April
August	December—February	November	March—May
		December	April—June

*Only recommended in Northern States.

SPRING FLOWERING

This new class of Sweet Pea is a worthwhile addition. November 1st sowing will start flowering in early April and will continue to bloom on longer stems than early flowered varieties sown the same date. **This new class is only recommended for sowings after November 1st;** also used for out of doors sowing.

STANDARD VARIETIES

	1/2 oz.	1 oz.	1/4 lb.	Lb.
Clear Pink —				
Soft, clear pink	\$.40	\$.60	\$1.75	\$6.00

Apple blossom pink75	1.50	5.50
Navy Blue —Deep violet blue.....	.75	1.50	5.50

SWEET PEAS (Summer Flowering)

We are in a position to supply all of the best varieties.

oz., 20c 1/4 lb., 60c lb., \$1.75

STOCKS

Flower buds are initiated in stocks when the temperature is below 60 degrees for the greater part of the night. Therefore, it is not advisable to sow the seed for an early crop any sooner than August 1st, and even later in the southern states. To secure the greatest percentage of doubles the largest and most vigorous plants should be selected. It is wise to sow seed for twice the number of plants wanted to assure ample numbers so that only the strongest seedlings are planted.

Stocks are very subject to stem rot and unless planted into fresh soil or steam sterilized soil, large numbers of plants are lost from this disease. It is our opinion that the crop planted to follow shaded Chrysanthemums is more profitable than the early sowing.

If additional light is applied from 6 P. M. to 10 P. M., starting October 25th and continuing until color shows, ten days to two weeks earliness can be expected. Ordinary 40 or 60 watt Mazda electric bulbs are used and the lamps so erected that the light is about 24 inches above the plant and will cover 16 square feet of bench area. The non-branching type, which has come into general use, should be planted 3 inches in the row and 6 inches between rows, producing a single stem.

NON-BRANCHING (Excelsior Column Stocks)

	Tr. Pkt.	1/4 oz.	Oz.
Dark Blue	\$1.00	\$2.50	\$9.00
Gardenia—Shimmering glistening white	1.25	3.50	12.00
Malmaison Pink—Blush pink	1.00	2.50	9.00
Ruby—Rich crimson red	1.00	2.50	9.00
Silvery Lilac—Lavender	1.00	2.50	9.00
White	1.00	2.50	9.00
Yellow Wonder—Rich creamy yellow with full double florets well arranged on long spikes	1.00	3.50	12.00

GIANTS OF CALIFORNIA (Branching)

The Giants of California can also be grown similarly to the non-branching type. When grown this way the side shoots should be removed. For the retail grower the branching types are gaining in popularity. These should be planted 8 x 8 inches and topped when 6 inches tall to produce side shoots of sufficient length.

	Tr. Pkt.	1/4 oz.	Oz.
Pacific—Blue	\$.35	\$1.00	\$3.50
Red Woods—Blood red35	1.00	3.50
Rose Light—Bright Rose35	1.00	3.50
Tahoe—Lavender35	1.00	3.50
Santa Maria—White35	1.00	3.50
Santa Barbara—Chamois35	1.00	3.50

BISMARCK OR BRANCHING STOCKS Early Giant Imperial

This class continues to be popular with the florist for a cut flower.

	Tr. Pkt.	1/4 oz.	Oz.
Buttercup—Rich Yellow	\$.35	\$1.00	\$3.00
Chamois—Ivory, tinted Old Rose35	1.00	3.00
Dark Blue or Purple35	1.00	3.00
Elk's Pride—Rich deep purple35	1.00	3.00
Fiery Blood Red35	1.00	3.00
Flesh—Bright Flesh35	1.00	3.00
Golden Rose—Light golden Rose35	1.00	3.00
Lavender—Silvery Lilac35	1.00	3.00
White35	1.00	3.00

Sowing Dates of Column or Non-Branching Stock for Various Blooming Dates

Time of sowing	Flowering	Time of sowing	Flowering	Time of sowing	Flowering
August 1	January	October 1	March	January 1	Mother's Day
